

Gain early insight into case data and mitigate potential risks with no per gigabyte pricing or appliance limitations.

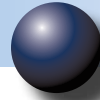

Value

- Early culling of the document collection can reduce processing time and labor up to 95%
- No per gigabyte pricing keeps fees predictable and economical
- Shared database access with eCapture means no more exporting and importing between multiple technologies, reducing cost of ownership
- Fully Unicode compliant multi-language support

Flexibility

- Server class application with mobile licensing means you can run Allegro on the go, using just a laptop
- Report driven user interface and dual monitor support give you ultimate UI flexibility
- Multiple tagging options allow customization of collection
- Non-appliance restricted early data analysis tool gives you freedom to run across your own network, without purchasing additional infrastructure

Control

- Gain the case knowledge you need to control expenses and mitigate risk before e-discovery processing begins
- Early culling of the case data gives you command over the size of your document collection and all associated costs
- Gain control of the case data from the first day without waiting days for processing
- Control your data with IPRO's popular Open SQL Architecture, providing you with the added ability to create your own custom reports and output

Other products in the IPRO Enterprise Solution

IPRO eCapture

Multi-threaded and distributed electronic discovery product for large volumes of data that need to process quickly and efficiently.

IPRO Eclipse

A litigation database and more, IPRO Eclipse gives you the power of a database and allows you to effectively control all aspects of your case, from capture to production, through a single Discovery Management application.

IPRO Allegro is an early case assessment tool that provides law firms, corporate counsel and service providers early insight into the size, scope, and composition of data collections, empowering them to make informed case decisions before moving to the costly stages of e-discovery processing and review.

IPRO Allegro allows for interactive, real time culling of the case data using search terms and metadata filters, which reduces CPU usage and can decrease processing time by up to 95%. IPRO Allegro does not utilize a per gigabyte pricing structure, allowing you the ultimate control over your final project costs.

IPRO Allegro is fully Unicode compliant, non-appliance restricted, and features a completely customizable user interface, including dual monitor support. It shares common database access with IPRO eCapture, which allows you to begin the TIFFing process without any exporting or importing between databases, reducing cost of ownership and ensuring data integrity throughout the litigation process.
