

IPRO Build manages all production tasks from one powerful tool.

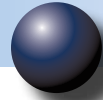

Value

- Manage from one powerful application with unlimited processing per site
- Flexible “branding” options
- Create PDFs for e-Filings and closing binders
- Produce color and b/w images in the same production set

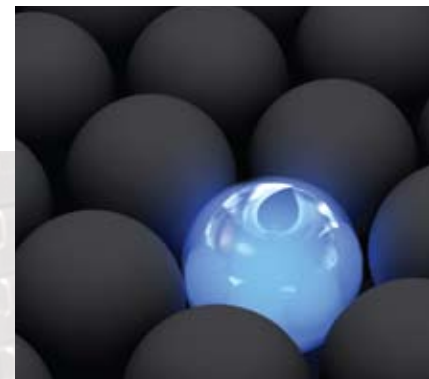

Flexibility

- Easily create industry standard TIFF, PDF, or color JPG files
- Build a collection or subset of images based upon user defined criteria
- Position Bates™ numbers and messages in any of six zones on the page
- Multi-line messaging capability
- Full control of fonts for messaging and Bates stamping

Control

- Create sets of images endorsed with Bates numbers, messages and redactions at speeds up to 60,000 images per hour
- Produce searchable PDF files and eliminate text from redacted areas
- Limit individual PDF files by number of pages or file size – critical for e-Filings
- Track document history back to original document ID number
- Renumber subsets to eliminate production number gaps

PROCESSING

REVIEW

PRODUCTION

What others have to say:
“I simply don’t know how we’d perform some of the complex productions we handle without IPRO Build. With the ability to build new document collections, convert to different image types such as TIF, PDF or JPG in bulk, by document ranges, with complex tagging and endorsement logic, IPRO Build is the ultimate document production toolkit. IPRO tools work seamlessly together, and every module added to the Litigation Support department’s toolkit makes them infinitely more capable in that area.”

IPRO Build is the premier production application in the industry, designed to provide the user with a powerful toolset for data manipulation of an imaged document collection. IPRO Build allows the creation of new collections, subsets, renumbered sets, new images with annotations, redactions, messages, and Bates numbers physically embedded in the new images.

Renumber, electronically Bates stamp and burn redactions into the image while keeping the original image collection pristine. IPRO Build eliminates gaps and cross-references the production Bates number back to the original image number allowing for rapid, efficient searching.

IPRO Build automatically loads the production images into Concordance® or CT Summation® databases.

When document production is your challenge, IPRO Build is your solution.
