

IPRO Print Specifications

Last Updated: June 7, 2010

This applies to versions 8.6.0.55 and higher.

PCL Tray Codes

IPRO Print has PCL stapling and tray codes programmed for various models. A typical tray code would be ESC&I7H for Auto Select. Only the "7" part is listed below, with the rest being assumed. Some options have the same tray codes but different stapling codes. For instance, there are three Sharp options which all have the same tray codes but each has a different stapling code.

Tests were performed with the HP LaserJet 5si driver. The following recommendations are for using colored banner and slip sheets: Put the white letter paper in a lower tray number than the color letter paper so that the color letter tray does not become the default tray. If the white and color letter papers are placed in large trays, make sure that both are facing the same way, either portrait or landscape.

0 Generic PCL Printer (No Stapling)

Auto Select	7
