

*IPRO View, the image repository that integrates to all databases.*

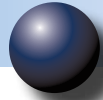

### Value

- Cost effective tool to manage discovery documents
- Minimal training to get users up and running
- Maximize productivity by reviewing and searching documents before coding/indexed data is delivered
- Works with 3rd party applications, and directly supports Concordance® & CT Summation® databases
- Allows viewing of electronic documents in 'universal' viewer

### Flexibility

- Powerful redaction feature allows custom labels
- Highlighting, user notes, annotations & markups on images
- Custom printing of redactions, Bates numbers, tag messages
- Email PDFs complete with messages, endorsements and markups
- Word search with highlighted hits
- OCR a page or a document on the fly
- Supports collections of text and native files without images

### Control

- Graphical view of document boundaries via "Tree View" navigation
- Hotkeys for every feature
- One-click tagging
- Fast and efficient image access and display
- Supports all industry-standard image formats, including PDF
- Use anywhere, anytime - runs locally, via LAN, WAN or over the Internet with secure TCP/IP

**What others have to say:**

*"The IPRO View Premium product is the finest imaged document review platform on the market. As opposed to other view applications such as Summation's™ image viewer and LexisNexis' Concordance Image™, IPRO View allows users to make document tagging decisions on a page level as opposed to a document level. Document boundaries can be updated with a double click, and parent/child hierarchy is retained and displayed in a manner simply unavailable in other 'off the shelf' applications. IPRO View's ability to connect to our client sites and remote locations via a WAN connection is also a huge benefit."*

IPRO View is an industry leading document viewing program that lets users view, search, annotate and retrieve digital images over a LAN, WAN, or the Internet.

Reviewers can concurrently search, retrieve, tag, and annotate images. Small to medium-sized organizations can take advantage of the same power and flexibility in a single workstation environment with room to grow as the demand on litigation support increases.

Advanced project navigation allows review of images even before coding has been completed and users can begin using the tagging and mark-up features immediately upon receipt of images.

IPRO View offers rapid viewing, extensive search capability. It includes a tool set that is unrivaled in the industry with user defined tags, barcode support, on-the-fly document boundary modification, and searchable sticky notes and embedded text.
